

Your Scores:

- Auditory: 35%
- Visual: 50%
- Tactile: 15%

These results did not shock me, I've always known that I need to see someone do the task before I do it to understand what is happening. I also find it easier when visual and auditory examples are being shown hand in hand. I did not expect the visual percentage to be so high but it does make sense. Watching the videos provided in class will most likely help me and if I struggle more I could look up other videos on youtube to help push along my learning.
